Research Highlights

- **Agentic Post-Training**. I construct scalable and effective agent training environments [COLM 2025], design lightweight training tasks that generalize to multiple coding agent benchmarks [ICML 2026], and tackle reward-hacking for rubric-based RL [preprint].
- **Coding Agents**. I develop multi-agent inference settings that are effective, flexible, and cost-efficient [EMNLP 2026], design automatic analysis methods that efficiently discover the influential factors of coding agent training demonstrations [preprint], and build evaluation benchmarks for realistic workplace tasks [Neurips 2025].
- **Factuality and Trustworthiness**. I train critique-based evaluators that substantially improve factuality training [ACL 2025] and design evaluation frameworks for reliable and trustworthy clinical text generation [ACL 2024].
